

# Graffiti Detection Using Security Industry Intelligent Video Analytics

**Detect**

**Confirm**

**Arrest**

Real time detection of graffiti allowing motorway control centre staff to alert Police.

Lower cost security video analytics allowing a higher volume of installs on smaller budgets.

Improving the road users visual impressions of the motorway and saving the NZTA money in clean up.

Our trial installation on the Auckland Motorway has led to 3 prosecutions. Including the one recently screened on TV 2's Motorway Patrol. (27 Feb 8:00pm)

The success of this trial has led to a reduction in graffiti at this site and across the network.

This same technology can be used for:

- Area Security
- Speed and direction monitoring including contra flow.
- Loitering
- Stationary traffic
- Removed items
